Algebra II Notes Inverse Functions

Inverse function. Two functions, f and g , are inverses of each other when the composition $f [g (x)]$ and $g [f (x)]$ are both the identity function. That is, $f [g (x)] = g [f (x)] = x$.

Inverse Functions - CliffsNotes

Inverse functions – Two functions are inverse functions if the domain of the original function matches the range of the second function. Inverse relation – Interchanges the input and output values of the original relation .

Algebra II Notes Inverse Functions Unit 1

Given the function $f(x)$ we want to find the inverse function, $f^{-1}(x)$. First, replace $f(x)$ with y . This is done to make the rest of the process easier. Replace every x with a y and replace every y with an x .

inverse function for a one-to-one function, follow these steps: 1. Rewrite the function using y instead of $f(x)$. 2. Switch the x and y variables; leave everything else alone. 3. Solve the new equation for y . 4. Replace the y with $f^{-1}(x)$. 5. Make sure that your resulting inverse function is one-to-one.

Inverse Functions - CliffsNotes

$x = 3 \Rightarrow y = 5x + 5 = 3 \Rightarrow y = 2 \Rightarrow (x + 5)$
 $= 2 \Rightarrow 3 = y = 2 \Rightarrow x + 10 = 3 = y$ Step 4:
The resulting function is the inverse of f . Replace y with $f^{-1}(x)$.

Intro to inverse functions (article) | Khan Academy

Most of the functions we have studied in Algebra I are defined for all real numbers. This domain is denoted \mathbb{R} . For example, the domain of $f(x) = 2x + 5$ is \mathbb{R} , because $f(x)$ is defined for all real numbers x ; that is, we can find $f(x)$ for all real numbers x . The domain of $f(x) = x^2 - 6$ is also \mathbb{R} , because $f(x)$ is defined for all real numbers x .

The inverse of a function $f(x)$ is denoted $f^{-1}(x)$. Finding the Inverse of a Function by Reversing Operations The trick to finding the inverse of a function $f(x)$ is to "undo" all the operations on x in reverse order. The function $f(x) = 2x - 4$ has two steps:
