For those physicians involved in follow-up care of cancer survivors, this new resource is an excellent guide, even if the physician's training in oncology has been limited. Picking up where most oncology texts leave off, *CANCER PATIENT FOLLOW-UP* describes the current management strategies for treatment of patients who have been potentially cured of cancer. The first part of the book covers the costs of surveillance and concerns of the patient and physician. The second section focuses on the various types of cancers with counterpoints from numerous prestigious international institutions. New and exciting trends in cancer research are explored in the final section. Presents practical guidelines to follow-up care of cancer survivors from the world's leading cancer institutions: Memorial Sloan-Kettering Cancer Center, Roswell Park Cancer Institute, Fred Hutchison Cancer Hospital and the University of Washington in Seattle, Royal Liverpool University Hospital, and National Kyushu Cancer Center in Japan, among others. Features separate chapters on each major "curable" cancer site. Answers key questions such as: How often should I schedule office visits? What specific information should I seek when the patient returns? When should laboratory tests be ordered? How do evaluate the results of the tests? What if there is

After the disastrous events in the Bajoran system, Captain Benjamin Sisko must confront the consequences of the recent choices he has made in his life. At the same time, the United Federation of Planets and its Khitomer Accords allies have come to the brink of war with the Typhon Pact. While factions within the Pact unsuccessfully used the recent gestures of goodwill—the opening of borders and a joint Federation-Romulan exploratory mission—to develop quantum-slipstream drive, they have not given up their goals. Employing a broad range of assets, from Romulus to Cardassia, from Ab-Tzenketh to Bajor, they embark on a dangerous new plan to acquire the technology they need to take control of the Alpha and Beta Quadrants. While UFP President Bacco and Romulan Praetor Kamemor work feverishly to reestablish peace, Captains Sisko, Jean-Luc Picard, and Ro Laren stand on the front lines of the conflict . . . even as a new danger threatens the Bajoran wormhole as it once more becomes a flashpoint of galactic history.

Still on Romulus in pursuit of his goal of reunifying the Vulcans and Romulans, Spock finds himself in the middle of a massive power struggle. In the wake of the assassination of the Praetor and the Senate, the Romulans have cleaved in two. While Empress Donatra has led her nascent Imperial Romulan State to establish relations with the Federation, Praetor Tal ' aura has guided the original Romulan Star Empire toward joining the newly formed Typhon Pact. But numerous factions within the two Romulan nations vie for power and undivided leadership, and Machiavellian plots unfold as forces within and without the empires conduct high-stakes political maneuvers. Meanwhile, four years after Benjamin Sisko returned from the Celestial Temple, circumstances have changed, his hopes for a peaceful life on Bajor with his wife and daughter beginning to slip away. After temporarily rejoining Starfleet for an all-hands-on-deck battle against the Borg, he must consider an offer to have him return for a longer stint. Beset by troubling events, he seeks spiritual guidance, facing demons new and old, including difficult memories from his time in the last Federation-Tzenkethi war.

Developers who want to access USB devices from their embedded systems will find a helpful resource in *USB Embedded Hosts: The Developer's Guide*. This new book from the author of *USB Complete* shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.
