NEW! Now with both Imperial and Metric Values! Since its first edition in 1951, Industrial Ventilation: A Manual of Recommended Practice has been used by engineers and industrial hygienists to design and evaluate industrial ventilation systems. The 28th edition of this Manual continues this tradition. Renamed Industrial Ventilation: A Manual of Recommended Practice for Design (the Design Manual) in 2007, this new edition now includes metric table and problem solutions and addresses design aspects of industrial ventilation systems.

This new standard describes fundamental good practices related to the commissioning, design, selection, installation, operation, maintenance, and testing of local exhaust ventilation (LEV) systems used for the control of employee exposure to airborne contaminants.

This document detail the National Institute for Occupational Safety and Health's review of data characterizing occupational exposure to airborne refractory ceramic fibers (RCFs) and information about potential health effects obtained from experimental and epidemiologic studies.

1. Purpose. To implement policy changes recommended by the Naval Inspector General (NAVINGEN) to Office of the Chief of Naval Operations Special Assistant for Safety Matters (OPNAV (N09F)) and to define and outline the conduct and reporting of the self-assessment process for safety and occupational health (SOH) programs. 1. PURPOSE. The Marine Corps Occupational Safety and Health (OSH) Program Manual promulgates the requirements and establishes procedures to implement the reference. 2. INFORMATION. This Manual and all references provide the requirements and guidance for commanders and Marine Corps OSH Program professionals to identify and manage risk, maintain safe and healthful operational environments, and meet the Mission Essential Task List (METL) requirements. 3. SCOPE. This Manual is applicable to all Marine Corps activities, including nonappropriated fund activities and operations that are under the sponsorship of the Marine Corps Community Services (MCCS) Director or unit MCCS officers for the purposes of morale, welfare and recreation. This Manual shall also apply to activities that are involved in the acquisition, operation, sponsorship or maintenance of all facilities, activities, and programs. CMC (SD) will provide guidance, upon request, for program responsibilities on contractors, e.g., public-private venture, etc. 4. EFFECTIVE DATE. This Manual is effective the date signed. Prior to implementation of this Manual, activities must, where applicable, discharge their labor relation's obligations. Assistance and guidance may be obtained from CMC (MPC). DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

The book is a guide for Layers of Protection Analysis (LOPA) practitioners. It explains the onion skin model and in particular, how it relates to the use of LOPA and the need for non-safety instrumented independent protection layers. It provides specific guidance on Independent Protection Layers (IPLs) that are not Safety Instrumented Systems (SIS). Using the LOPA methodology, companies typically take credit for risk reductions accomplished through non-SIS alternatives; i.e. administrative procedures, equipment design, etc. It addresses issues such as how to ensure the effectiveness and maintain reliability for administrative controls or "inherently safer, passive" concepts. This book will address how the fields of Human Reliability Analysis, Fault Tree Analysis, Inherent Safety, Audits and Assessments, Maintenance, and Emergency Response relate to LOPA and SIS. The book will separate IPL's into categories such as the following: Inherent Safety eliminates a scenario or fundamentally reduces a hazard Preventive/Proactive prevents initiating event from occurring such as enhanced maintenance Preventive/Active stops chain of events after initiating event occurs but before an incident has occurred such as high level in a tank shutting off the pump. Mitigation (active or passive) minimizes impact once an incident has occurred such as closing block valves once LEL is detected in the dike (active) or the dike preventing contamination of groundwater (passive).

At last – a second edition of this hugely important text that reflects the progress and experience gained in the last decade and aims at providing background and training material for a new generation of risk assessors. The authors offer an introduction to risk assessment of chemicals as well as basic background information on sources, emissions, distribution and fate processes for the estimation of exposure of plant and animal species in the environment and humans exposed via the environment, consumer products, and at the workplace. The coverage describes the basic principles and methods of risk assessment within their legislative frameworks (EU, USA, Japan and Canada).
