Quality Assurance of Data used for Training the Model. One of the most overlooked (or ignored) aspects of building a machine learning model is to check whether the data used for training and testing the model are sanitized or, they belong to an adversary data set. The adversary data sets are the ones which could be used to skew the results of the model by training the model using wrong / incorrect data.

Quality Assurance in Distance Education and E-Learning: Challenges and Solutions from Asia documents the existing regulatory framework covering quality assurance (QA) systems in distance education (DE) in a number of Asian countries. It draws on the knowledge and experience of 16 selected DE/e-learning institutions of Asia and reveals the respective development of QA systems and procedures within these providers/programmes. The endeavour towards developing QA systems through various stages of testing and development is in response to the growing public concern for the quality of DE as well as staff aspirations for quality. This book, through the selection of cases from the aforementioned institutions, covers a wide range of QA systems and perspectives of quality in DE. These cases present good practices in QA for DE/e-learning, analyse challenges in assuring the quality of DE products and services, offer possible solutions to meet those challenges, and present lessons for other DE providers.

Decades of software testing experience condensed into the most important lessons learned. The world's leading software testing experts lend you their wisdom and years of experience to help you avoid the most common mistakes in testing software. Each lesson is an assertion related to software testing, followed by an explanation or example that shows you the how, when, and why of the testing lesson. More than just tips, tricks, and pitfalls to avoid, Lessons Learned in Software Testing speeds you through the critical testing phase of the software development project without the extensive trial and error it normally takes to do so. The quality improvement of higher education is needed to guarantee the quality of the graduates for the future competitiveness. Due to the local and global changes and the issue of Industrial Revolution 4.0, higher education needs to compliance the paradigm. Labor requirement's competence requires curriculum reformation from input-based education to outcome-based education. In learning, the paradigm friction appears from instructional paradigm to learning paradigm. To solve the related proportion, LP3M (Institute of Educational Development and Quality Assurance) Universitas Andalas initiated the International Conference on Educational Development and Quality Assurance (ICED-QA 2). This conference was attended expert and researchers from different countries to discuss the issues about "Educational Quality Development in Industrial Revolution 4.0".

This most unusual book results from the NATO Advanced Research Work shop, "Designing Hypertext/Hypermedia for Learning", held in Rottenburg am Neckar, FRO, from July 3-8, 1989. The idea for the workshop resulted from the burgeoning interest in hypertext combined with the frustrating lack of literature on learning applications for hypertext. There was little evidence in 1988 that hypertext could successfully support learning out comes. A few projects were investigating hypertext for learning, but

few conclusions were available and little if any advice on how to design hyper text for learning applications was available. Could hypertext support learning objectives? What mental processing requirements are unique to learning outcomes? How would the processing requirements of learning outcomes interact with unique user processing requirements of browsing and constructing hypertext? Should hypertext information bases be restructured to accommodate learning outcomes? Should the user interface be manipulated in order to support the task functionality of learning outcomes? Does the hypertext structure reflect the intellectual requirements of learning outcomes? What kinds of learning-oriented hypertext systems were being developed and what kinds of assumptions were these systems making? These and other questions demonstrated the need for this workshop. The workshop included presentations, hardware demonstrations, sharing and browsing of hypertexts, and much discussion about all of the above. These were the experiences that you, the reader of this book, unfortunately did not experience.

This book looks at the practical steps that need to be taken to create the infrastructure for an e-learning initiative. The implications for adopting new learning strategies or delivery methods are far reaching and usually require major developmental input. The book is suitable for those responsible for managing e-learning schemes such as human resource and IT managers, managers of learning resource centres and team leaders.
