The advent of time-sharing systems was the first step toward distributed computing systems because it provided us with two important concepts used in distributed computing systems-the sharing of computer resources simultaneously by many users and the accessing of computers from a place different from the main computer room.

Distributed Operating Systems: Concepts and Design ...

A distributed system is one in which components located at networked computers communicate and coordinate their actions only by passing messages. This definition leads to the following characteristics of distributed systems:

A distributed system in its most simplest definition is a group of computers working together as to appear as a single computer to the end-user. These machines have a shared state, operate concurrently and can fail independently without affecting the whole system's uptime.
