Distributive property to see what you need to multiply by and this goes in the parentheses. Factor $5a - 10a^2 = 5a(1 - 2a)$ Find possible dimensions (length and width) for the rectangle, given the area. If you factor the area, you will have the length and width. $x^2 + 9x = x(x + 9)$ so x is length and $x + 9$ is width Now try to factor these: 1.

Distributive Property Guided Notes

3 Guided Notes 2.1 – Properties and Operations Date: ____ A property in mathematics is a statement that something that is true for all values. Today we will look at three properties of numbers: the commutative property, the associative property, and the identity property.

Name: PERIOD

How could I set this up to find the total? I could easily use Distributive Property to group ($\$3 + \5) and multiply by 6 so it would look like this: $6(3 + 5)$. This would also be the same as solving it like this: $6 \times 3 + 6 \times 5$. Using Distributive Property would be easier to use, both ways would get a total of \$48.
