SANDMARK can manufacture and supply high quality gears, up to Gear Quality Number AGMA 14 (or DIN 3, or ISO 3). The Gear Quality Number is also known as the Q-Number or the Gear Quality Grade. The Q-Number for a gear is a measure of the geometric accuracy level of teeth on the gear. While the standard used in the USA is set by AGMA (American Gear Manufacturer's Association) ; other regions of the world use different standards for gear teeth quality.

Some time ago we talked on this blog about the accuracy grades of gear teeth, highlighting how important it is because, when it is not indicated on a drawing, it can generate ambiguity and incorrect interpretations that will inevitably compromise the end result. This is why I think it is important to recap this subject once again. The accuracy grade of a gear can basically be considered as the ...
