The Carotek Heat Exchanger Selection Guide provides a model of the heat exchanger sizing and selection process. Types of Heat Exchangers By its most basic definition, an industrial heat exchanger transfers thermal energy from one fluid to another without mixing them. Heat exchangers can be generally classified into a few main types:

Some heat exchanger advertises the availability of finned tubes in a hairpin or double pipe heat exchanger. These would always be longitudinal fins, rather than the more common radial fins used in a cross-flow finned tube heat exchanger. In a double pipe heat exchanger design, an important factor is the type of flow pattern in the heat exchanger.
