Mapping human history : genes, race, and our common ...

The race was on to map the human genome. And it was a photo finish. Officially, Celera beat the HGP by several months. In April 2003, scientists announced that they had sequenced the human genome, compiling a list of the three billion letters of genetic code that make up what researchers thought was humanity's common DNA.

Mapping the Human Genome: History in the Making | GeneSight

Genetics has long struggled with the definition of race. In the first decades of the 20th century, race was defined by discrete types, the belief that one member of a race was thought to share the same physical and social traits with other members of that race. In these early ideas about race, races generally mapped onto continental populations.

What Scientists Mean When They Say 'Race' Is Not Genetic ...

Mapping Human History discusses how the use of mitochondrial DNA and Y chromosomal DNA can be used to trace the common origins of humans. Steve builds a case for how humans appeared as a distinct group about 150,000 to 200,000 years ago based on genetic variation we see in people today.
