The Range Rover air suspension system consists of several major components. Air bags sit in the four corners of the vehicle, and can be inflated or deflated to adjust the vehicle body's height from the wheel base. Height sensors also sit in each corner of the vehicle and detect its distance from the ground.

### Range Rover Air Suspension Problems | It Still Runs

History of EAS. Contrary to common belief, EAS systems have actually been used for decades, mostly in truck suspensions, but the Land Rover version was considered revolutionary when first introduced onto the Range Rover in the late "Classic" models. This early version caused many problems for owners, mainly due to lack of robustness in the sensors and computer control systems.
