ctx is the this context of the component that the action is "bound" to. The above action could be used in the ToggleButton as well as the ChocolateDisclaimer. In both cases, the context would be this. The action would be bound inside the component's constructor function: class ToggleButton extends React.

React Hooks in Action teaches you to use pre-built hooks like useState, useReducer and useEffect, and to build your own hooks. Your code will be more reusable, require less boilerplate, and you'll instantly be a more effective React developer.

Manning | React Hooks in Action

Action, Reaction, and Reflex Analytical philosophy of action typically begins by distinguishing between mere reflexes and intentional actions. The blink reflex and the patellar reflex involve bodily movements with no psychological intermediaries, while bodily movements like directing traffic are prompted by beliefs and desires. The philosopher then declares that he or ...

React Native apps compile into platform-specific code, reducing development time, effort, and cost! And because you're using JavaScript and the React framework, you benefit from a huge ecosystem of tools, expertise, and support. About the Book React Native in Action teaches you to build high-quality cross-platform mobile and web apps. In this hands-on guide, you'll jump right into building a complete app with the help of clear, easy-to-follow instructions.

React Native in Action: Dabit, Nader: 9781617294051 ...

In React, mutable state is typically kept in the state property of components, and only updated with `setState ()`. We can combine the two by making the React state be the "single source of truth". Then the React component that renders a form also controls what happens in that form on subsequent user input.

Forms - React

React is a JavaScript library for building user interfaces across a variety of platforms. React gives you a powerful mental model to work with and helps you build user interfaces in a declarative and component-driven way.

React in Action

It is typical for any HTTP requests within the action dispatcher in a react-redux app. 4. The reducer. So, after those actions get dispatched, where do they get handled? That happens in the reducer.
