Reading As A Perceptual Process

Current conceptions of visuo-spatial and lexical processing during reading (e.g., Reichle, Pollatsek, Fisher and Rayner, 1998) assume that attention confines recognition processes to a single word at a time and that interword saccades are triggered by the completion of an initial stage of lexical processing while attention is exclusively allocated to the fixated word.

Cbhen (1962) describes three steps in the perceptual motor process. They are (a) learning to handle self by control of body process of coordination; (b) learning to relate to the outer world of others and; (c) learning to manipulate the world "out there". Similarly, Zietz (1970) found three steps in learning

The Effects of Perceptual Motor Skills on the Reading ...

Perceptual interpretation is an integral part of the perception process. Without interpretation, selection and organisation of information do not make any sense. After the information has been received and organised, the perceiver interprets or assigns meaning to the information.

Stages Involved in Perception Process

The perceptual process is a sequence of steps that begins with the environment and leads to our perception of a stimulus and action in response to the stimulus. It occurs continuously, but you do not spend a great deal of time thinking about the actual process that occurs when you perceive the many stimuli that surround you at any given moment.

Eye Fixation Durations in Reading: Models of Frequency ...

While our sensory receptors are constantly collecting information from the environment, it is ultimately how we interpret that information that affects how we interact with the world. Perception refers to the way sensory information is organized, interpreted, and consciously experienced. Perception involves both bottom-up and top-down processing. Bottom-up processing refers to the fact that perceptions are built from sensory input.
