Regression Analysis by Example, 5th Edition ...

Examples: Find the equation of the regression line for each of the two examples and two practice problems in section 9:1. Example 1: First, find the slope m . Start by determining the numerator: $n \sum xy - \sum x \sum y = 5(1189) - 37(139) = 802$ Next, find the denominator: $n \sum (x^2) - (\sum x)^2$

Acces PDF Regression

$$X \times 2 = 5375(37)2$$

=506 Divide to obtain

$$m = 802 \quad 506 \quad \sim 1:58$$

Now, find the y-

intercept: $b = \frac{\sum y_n}{n} - m \frac{\sum x_n}{n}$

$$x_n \sim 139 \quad 5 \quad 1:58$$
