System Analysis In Political Science

Systems analysis. Systems analysis, which was influenced by the Austrian Canadian biologist Ludwig von Bertalanffy and the American sociologist Talcott Parsons (1902-79), is a broad descriptive theory of how the various parts and levels of a political system interact with each other. The central idea of systems analysis is based on an analogy with biology: just as the heart, lungs, and blood function as a whole, so do the components of social and political systems.

The basic unit of Easton's system analysis is 'interaction'. Interaction is generated from the behaviour of the members of the system when they play their role as such. When these myriad interactions, in the perception of the scholar, become a 'set of interrelations', they are considered as a 'system'. Easton's subject matter of analysis is only the set of political interactions.
